1. **Created a dashboard for space:**

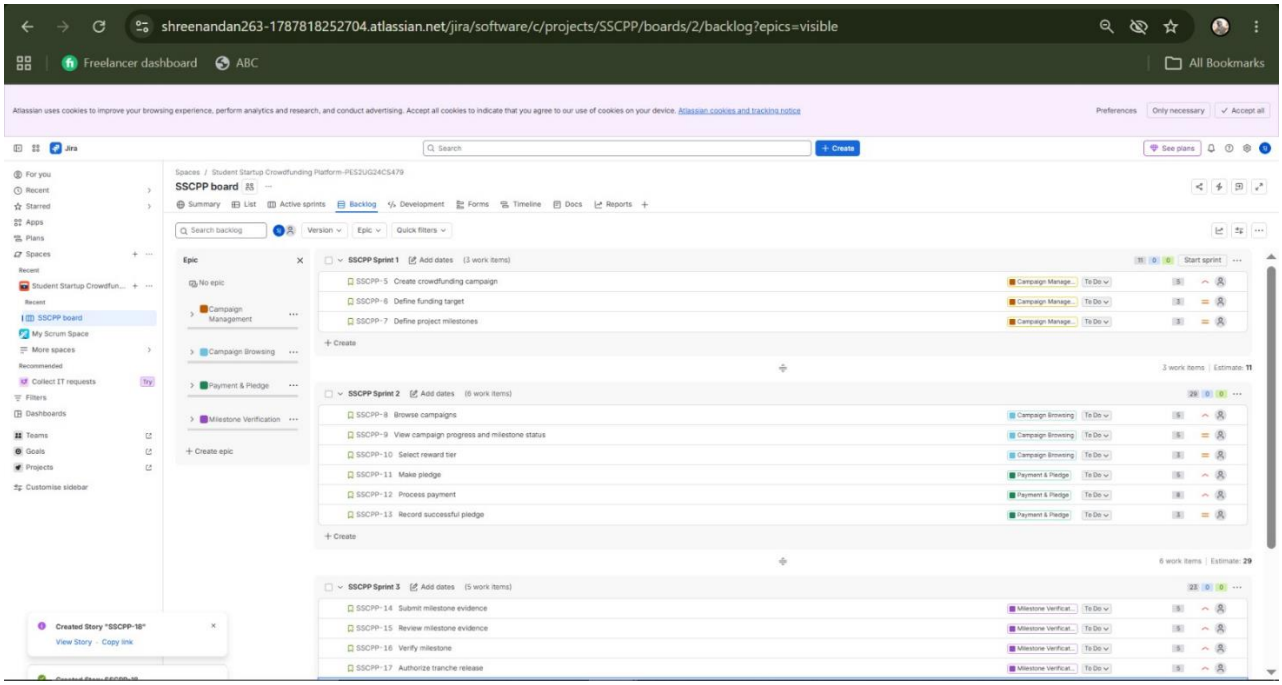

2. **Epic created :**

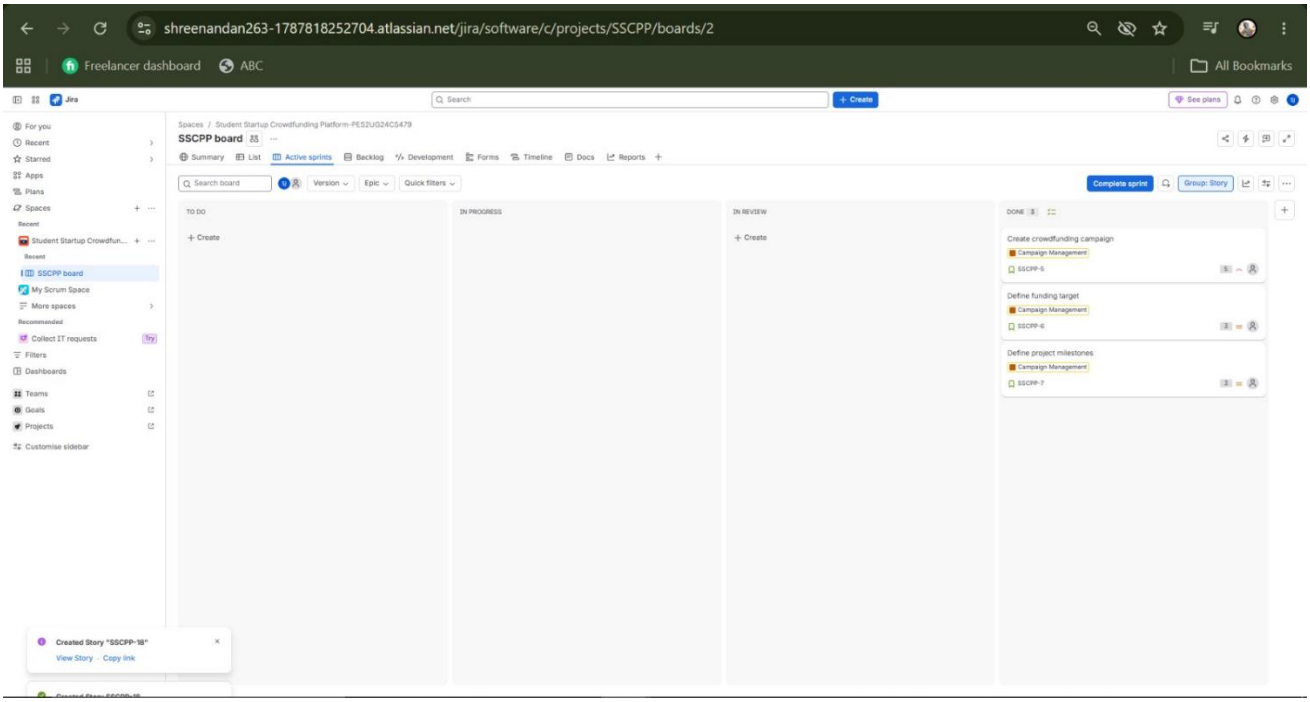

3. All backlogs created:

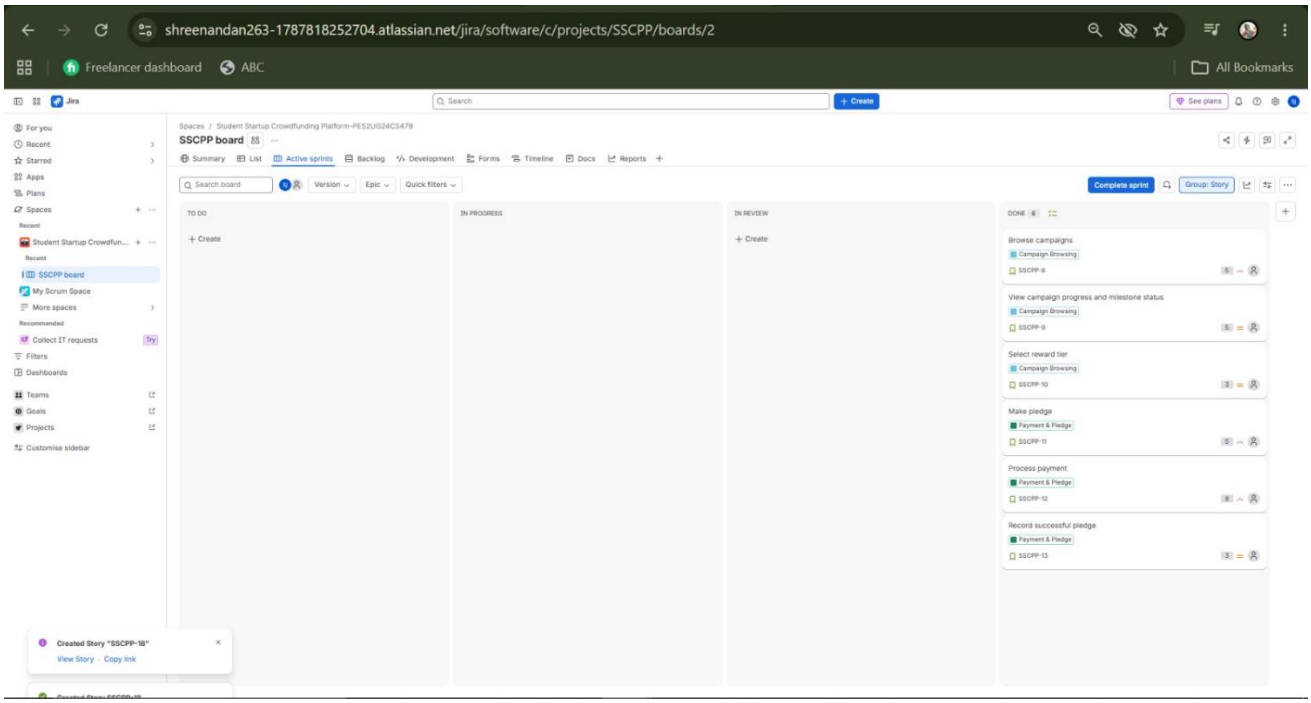

4. Sprint in progress:

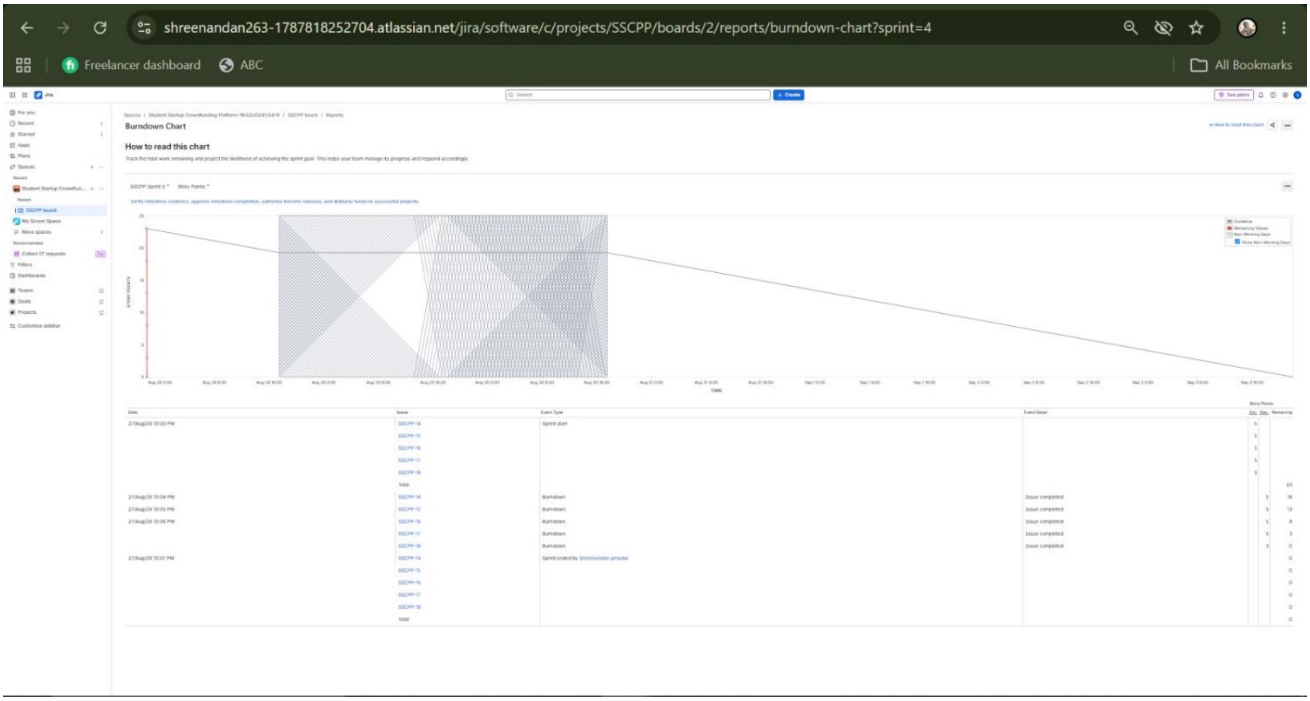

5. Active sprints:

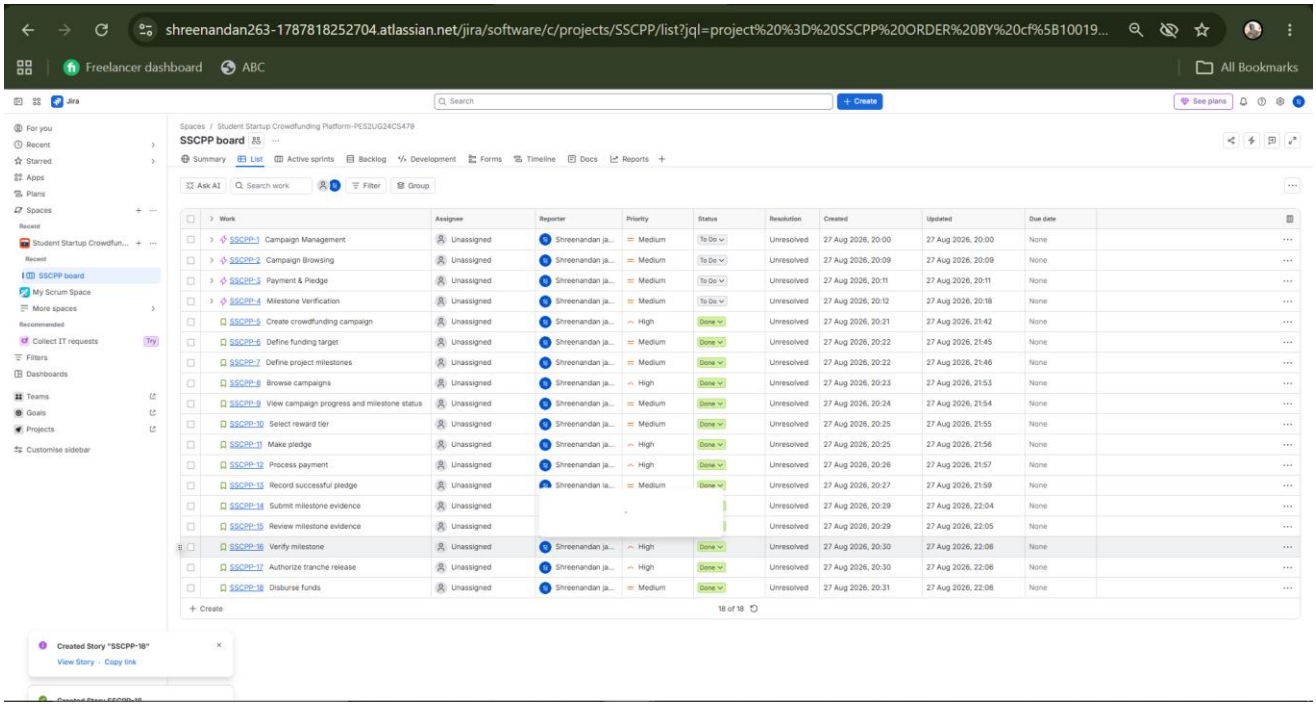

6. Burndown Chart:

7. Completed work items:

Reflection Questions:

1. Did your estimations reflect the actual effort?

->Yes, the story-point estimations provided a reasonable representation of the effort required for the tasks. Higher-point stories such as **Process payment** required more effort compared with smaller stories such as **Define funding target** and **Define project milestones**. Overall, the estimates helped us understand the workload and plan the sprints effectively.

2. Was your backlog well-prioritized?

->Yes, the backlog was prioritized based on the importance and dependency of the features. We first worked on **Campaign Management**, followed by **Campaign Browsing and Payment & Pledge**, and finally **Milestone Verification**. This order helped us build the project in a logical sequence.

3. How did your simulated sprint align with your plan?

->The simulated sprints aligned well with our plan. We divided the 14 user stories across three sprints according to their functionality. **Sprint 1** focused on creating and defining the campaign, **Sprint 2** focused on browsing campaigns and making payments, and **Sprint 3** focused on milestone verification and fund disbursement. All three sprints were completed successfully.

4. What insights did the burndown chart give about your team’s capacity?

-> The burndown chart showed how the remaining story points decreased as the work was completed. It helped us understand our team's progress and capacity during the sprint. By the end of the sprint, the remaining work reached **0 story points**, indicating that all planned work was completed. This showed that our sprint workload was manageable and that the team was able to complete the assigned work within the sprint.
